## EDUCATION

---

King Mareut – Alexandria, Egypt  
Bachelor's degree of information technology

(Graduating summer 2024)

## EXPERIENCE

---

### Softa Solutions (Hybrid) (Full time)

#### React JS Developer

January 2024 – Nov 2024

I worked as a junior React JS developer and I worked on several large React JS system and , also worked on integrating backend APIs and creating a responsive web apps that matched the Figma design with perfect pixel and it was a great to learn how to adapt with new and different technology because I worked on Angular ionic app and I made some modifications on Laravel project

### Freelancer and Upwork (projects for one time)

#### Front End Developer

Nov 2020 – Current

Working with a different clients from different countries and cultures in freelancer.com and Upwork.com , So I made more than type of project

- making portfolio website
- modifying some issues in websites (like responsive issues)
- Atomize html and CSS classes from an existing project

## PROJECTS

---

### 3s System [React JS] (workspace management system )

- Developing a responsive system that Used for Workspace Management it was a big design had a lot of pages and it had fine details , and It has a lot of features like Booking appointments Data recording and control all rooms Find out which rooms are available and user can choose more than payment method and a lot of other features .
- I developed one of The most important feature in the system which is reservation page.
- Technologies used: React JS/Vite , tailwind ,HTML , CSS , JavaScript

### Saboba [Mearn Stack] (Booking Web App)

- Developing a full stack responsive booking reservation web App that Used for book workers it was a big project had a lot of pages and logics and it had fine details , and It has a lot of features like Booking appointments Data recording and two dashboard for Admin and Workers and user can choose more than payment method and a lot of other features .
- I developed All the project backend and frontend from Figma design
- Technologies used: React JS/Vite , Express, MongoDB, NodeJS, tailwind ,HTML , CSS , JavaScript,in18

### **DM website (e-commerce)**

- Developing a responsive furniture e-commerce website, made a pagination section and It has filtered search and made a Testimonials section and I received Api from the backend team and I connected it to the design to make the all content from Api data and it has a product details page to present item which the user clicked on by ID.
- Technologies used: React JS, Vite/tailwind , Swiper JS/ react-i18next
- Features: support Arabic and English

### **pos [party Management System] (Laravel)**

- Developed a system for managing parties, concerts, and events.
- I developed the rental page and party features page and suppliers page and products page
- Technologies used: Laravel/PHP/HTML/tailwind/CSS/JavaScript

### **Pentola restaurant website (React-Bootstrap)**

- Developed a responsive Restaurant Web application helps user to order the restaurant's items and know more about restaurant and I made a Testimonials section to show clients reviews and I used Scroll-tigger to make a great animation in all section when scroll
- Technologies Used: React-Bootstrap/, CSS Animation /HTML/JavaScript

### **Mariens shop website [e-commerce]**

- E-commerce shoes website, converted Figma design to HTML and CSS and JavaScript Code to be an interactive responsive website and used 3d models from Three JS librarie and I made a product slider and used a pre, loading animation.
- Technologies Used: Bootstrap, Three JS , JavaScript , CSS , HTML.

### **Wahg web Application**

- A Wedding services responsive Website dependent on statistical data, has a search filter to choose the items and has a product details page to present the item which the user clicked on by ID.
- Technologies Used: React JS , Bootstrap5 ,JavaScript , HTML, CSS.

### **Flower Mobile Application**

- Angular ionic-app e-commerce flower App I create pages for small screens by html and CSS and It was a great challenge to work for my first time in a new technology .
- Technologies Used: Angular , Ionic , JavaScript , HTML, CSS.
